

Activity Scheduler for Healthcare

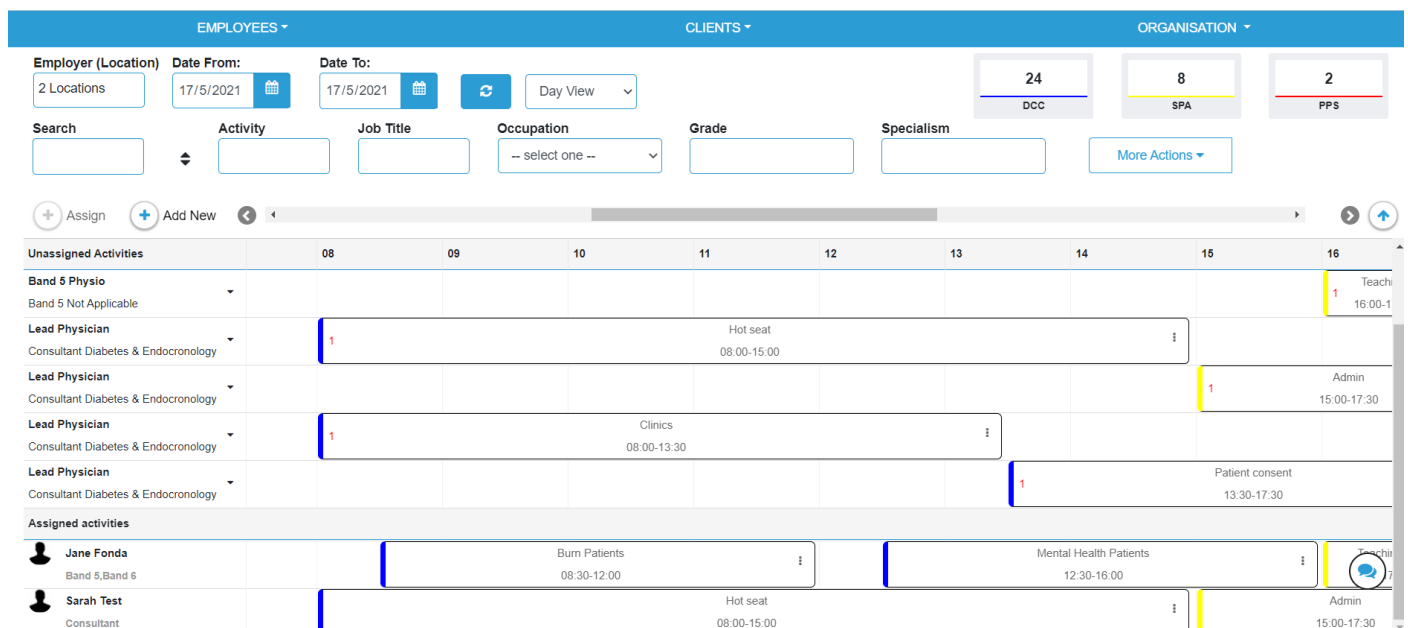

The Activity Scheduler is a fully integrated solution on the ProduQtive Workforce Management platform and forms part of our suite of Operational Deployment tools. Our motivation behind the solution was to give employers:

- The capability to convert job plans into a transactional tool to manage all eventualities.
- A tool to create multi-disciplinary events (activities/tasks) that can be staffed by different service units within the same organisation or
- Source complementary resource from external suppliers and
- Collaborate with like-minded employers within the community.

A typical use case will be a Surgical Department creates a weekly event “Knee Replacements” and can build the resource requirement – 1x Anaesthetist, 1 x ODP, 1 x Scrub nurse etc...and assign the event to a facility “Theatre 2”. The surgeon can also share a patient list and manage the confidentiality of the document. The different service units, like the Anaesthetics department, can now assign the suitable resource to the individual events.

Some the key features

- Create on-calls or stand by rota for your service unit.
- Have total visibility over staff leave and unavailability.
- Replace or remove employees from events.
- Change the location, increase headcount, or cancel the event.
- Use the different views (day, week, multi week) to have better visibility.
- Great functionality- drag and drop, point-and-click, sliders to affect start and end times.
- Interface with collaboration tools: In-App Messenger, Chat, email, and secure documents.

The screenshot displays the Activity Scheduler interface. At the top, there are tabs for EMPLOYEES, CLIENTS, and ORGANISATION. Below these are filters for Employer (Location), Date From, Date To, and a Day View selector. There are also three summary boxes for DCC (24), SPA (8), and PPS (2). A search bar is available with filters for Activity, Job Title, Occupation, Grade, and Specialism. Below the search bar are buttons for Assign, Add New, and More Actions. The main area is a calendar grid showing activities for days 08 to 16. Activities are categorized into Unassigned and Assigned. Assigned activities include Jane Fonda (Band 5, Burn Patients) and Sarah Test (Consultant, Hot seat).

Key Benefits

- No double entry to create rosters for approved job plans.

- Integrated with the core HR modules, Payroll, contingent staffing, Operational Systems (PASS) and workforce analytics.
- Track planned vs actuals in real-time.
- Empower employees to view and add their own activities.

The activity Scheduler forms part of the Operational Deployment Module. Customers buy the Operational Deployment module and automatically have access to all products within the module:

- E-Rosters
- Activity Scheduler
- Heatmap and Redeployment
- On-Call manager
- Extended Workforce Manager
